Team member : MAHALAKSHMI V - mahasabarivasan@gmail.com

User Story:

WhatNext Vision Motors wants to enhance its vehicle ordering and dealership management processes using a Salesforce CRM-based solution. The system streamlines vehicle orders by verifying vehicle availability, selecting appropriate dealers based on the customer's location, and automatically updating order details.

It also provides automated test-drive reminders and helps dealerships manage and monitor vehicle stock efficiently. Salesforce automation tools such as Apex Triggers, Batch Apex, Scheduled Apex, and Flows are used to minimize manual tasks and ensure accurate processing of vehicle-related activities.

By managing vehicle orders, dealer operations, test drives, and inventory within a centralized CRM platform, the solution improves operational efficiency, reduces errors, and provides a smoother experience for both customers and dealership staff.

1. INTRODUCTION

1.1 Project Overview :

The **WhatNext Vision Motors** project is a Salesforce-based CRM application developed to improve vehicle ordering and dealership management processes. It provides a centralized system for maintaining and managing vehicle details, dealer information, customer records, vehicle orders, test-drive schedules, and service requests.

The system automates several key operations, including verifying vehicle availability before placing an order, selecting a suitable dealer according to the customer's location, updating order details and status, and sending timely reminders for scheduled test drives.

By replacing manual procedures and separate systems with Salesforce-based automation, the project helps minimize errors, reduce processing time, and improve the efficiency of overall vehicle and dealership operations.

1.2 Purpose :

The main purpose of this project is to automate vehicle ordering, inventory management, dealer allocation, and customer-related activities using Salesforce CRM. The system is designed to minimize manual work, prevent order-related mistakes, enable real-time monitoring of vehicle orders and stock, and improve overall operational efficiency. It also aims to provide a smooth and convenient experience for customers and dealership staff.

2. IDEATION PHASE

2.1 Problem Statement

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	 Operations Manager	 manage vehicle orders	 stock information is manual	 systems are disconnected	 stressed
PS-2	 Customer	 place vehicle orders	 vehicle availability is unclear	 updates are delayed	 uncertain
PS-3	 Dealer	 check vehicle availability	 stock information is not updated quickly	 inventory is managed manually	 frustrated
PS-4	 Sales Executive	 process customer orders	 order details are difficult to track	 information is stored in different places	 confused
PS-5	 Inventory Manager	 monitor vehicle stock	 stock levels are not updated automatically	 no real-time inventory tracking	 concerned
PS-6	 Customer	 track my vehicle order	 order status is not clearly visible	 status updates are delayed	 anxious

2.2 Empathy Map Canvas

User Persona: Operations Manager

- **Think & Feel:** Concerned about wrong orders & stock errors
- **Hear:** Dealer and customer complaints
- **See:** Registers & spreadsheets
- **Say & Do:** Manual follow-ups
- **Pain:** Delays & cancellations
- **Gain:** Automation & dashboards

2.2 Empathy Map Canvas

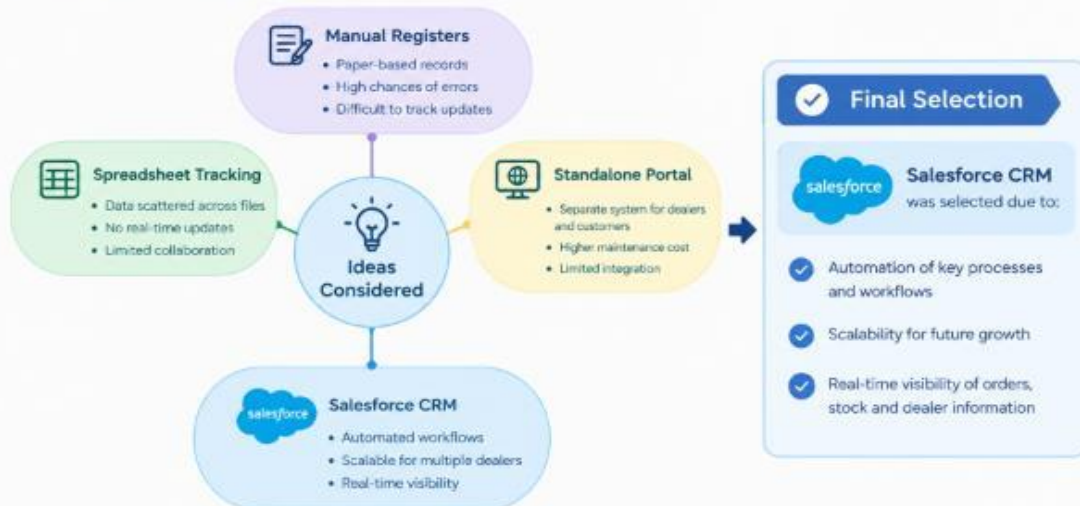

Understanding the needs, challenges and goals of our users helps us design a better solution.

2.3 Brainstorming & Idea Prioritization

2.3 Brainstorming & Idea Prioritization

We explored multiple ideas to solve the identified problems and chose the best solution based on feasibility, scalability and long-term value.

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stages:

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	Vehicle management
FR-2	Dealer management
FR-3	Customer order creation
FR-4	Stock validation
FR-5	Dealer auto-assignment
FR-6	Test drive scheduling
FR-7	Reports & dashboards

Non-Functional Requirements

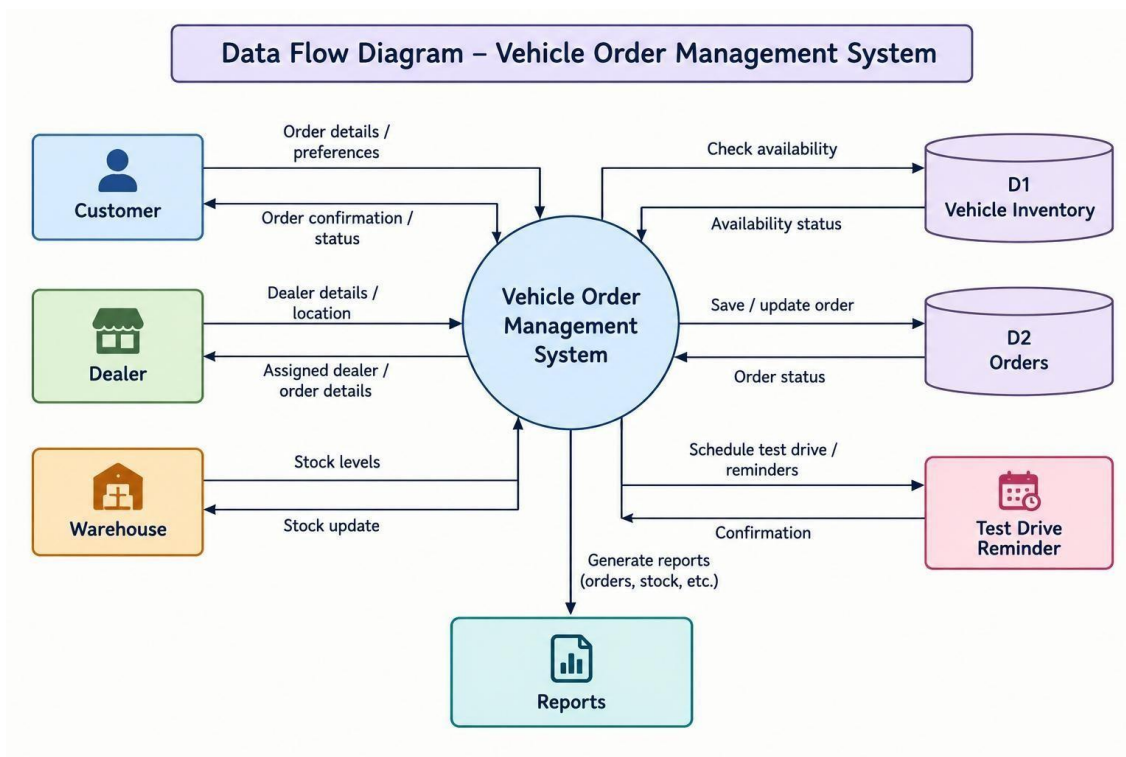

NFR	Description
Usability	Lightning UI for easy navigation
Security	Role-based access control
Reliability	Accurate automation

Performance	Fast order processing
Availability	24/7 cloud access
Scalability	Multi-dealer support

3.3 Data Flow Diagram

Flow:

Customer Input → Order Creation → Stock Validation → Dealer Assignment → Status Update → Reports

3.4 Technology Stack

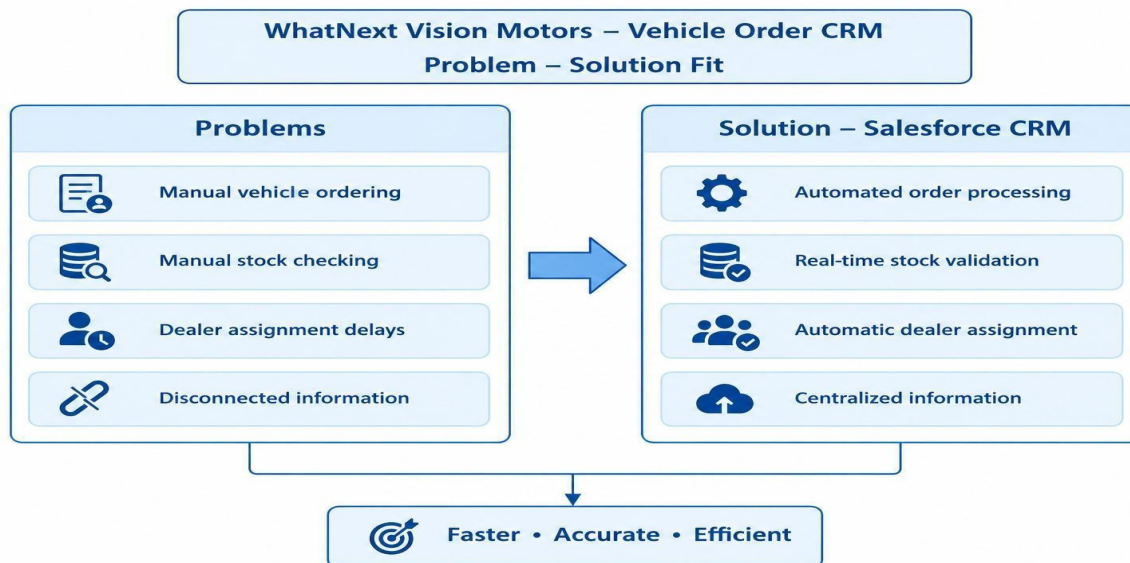

Layer	Technology
UI	Salesforce Lightning

Logic	Salesforce Flows
Database	Salesforce Objects
Automation	Validation Rules, Triggers
Processing	Batch Apex, Scheduled Apex
Reporting	Reports & Dashboards

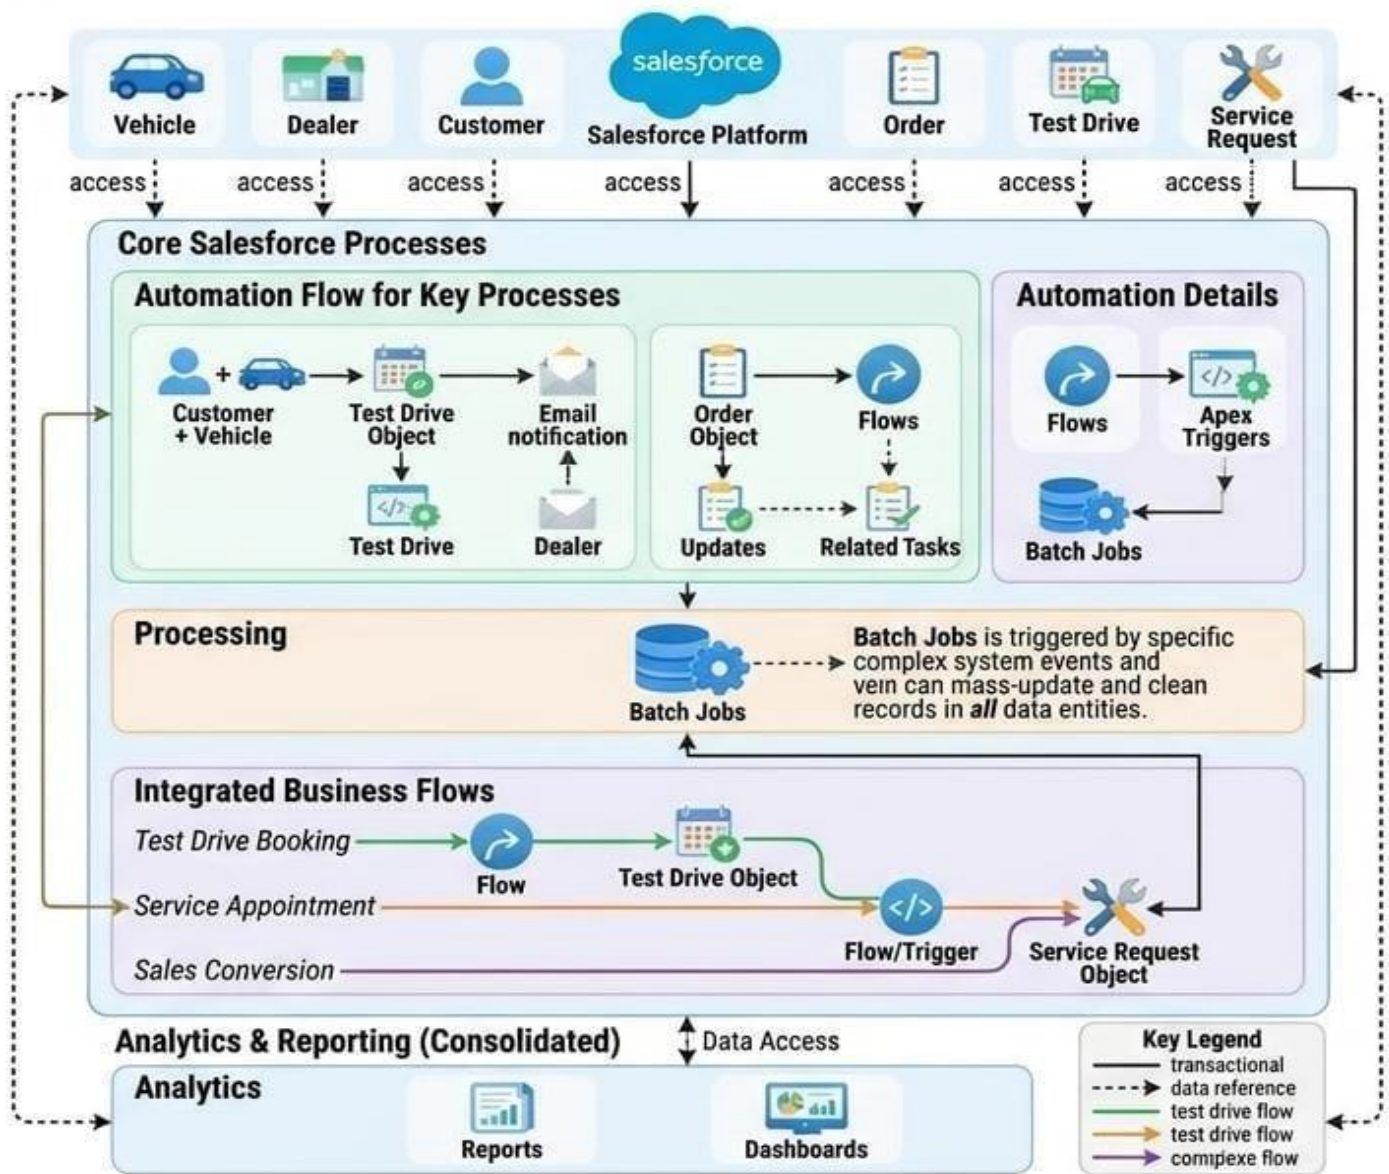

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The system eliminates fragmented operations by integrating automated stock validation, dealer assignment, and order processing within Salesforce.

4.2 Solution Architecture

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

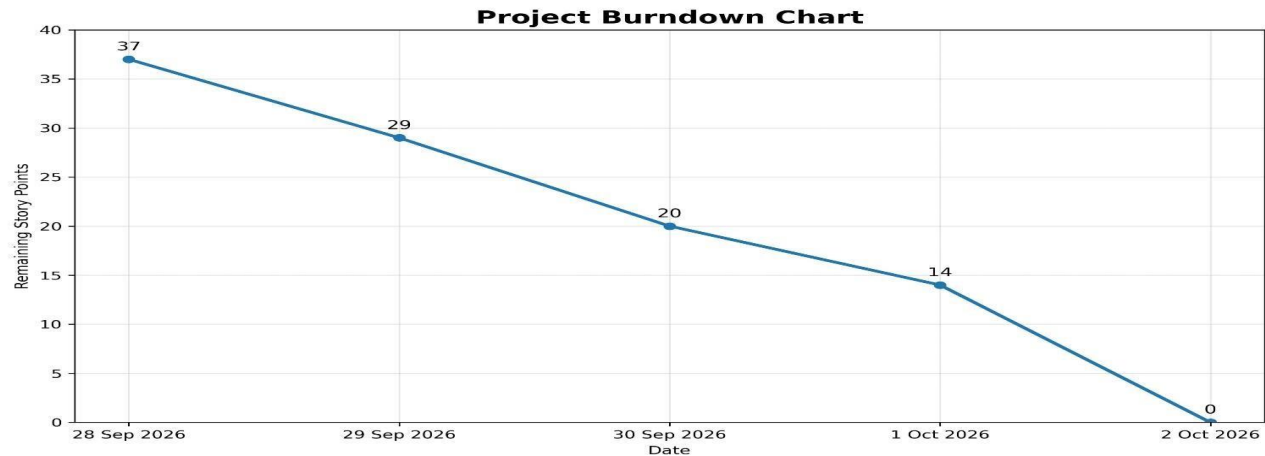

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Member
Sprint1	User & Login Management	USN-1	As a team member, I want secure login so that only authorized users can access the system.	3	High	Team Leader
Sprint-1	Vehicle Management	USN-2	As an admin, I want to add and update vehicle details so that vehicle information is maintained accurately.	5	High	Member 1
Sprint2	Customer Management	USN-3	As a staff member, I want to add and manage customer details so that customer information is organized.	5	High	Member 2
Sprint2	Dealer & Order Management	USN-4	As a user, I want to create and manage vehicle orders so that orders can be processed efficiently.	5	High	Member 3
Sprint3	Automation	USN-5	As a user, I want automatic stock availability updates so that I can see the current vehicle status.	3	High	Member 4
Sprint3	Automation	USN-6	As a manager, I want automated order validation so that incorrect orders can be prevented.	3	High	Team Leader
Sprint-4	Apex / Backend	USN-7	As an administrator, I want backend processing for vehicle and order data so that operations are reliable.	5	High	Member 1
Sprint4	Reports	USN-8	As a manager, I want order and sales reports so that I can monitor performance.	4	Medium	Member 2

Sprint5	Dashboard	USN-9	As a manager, I want a dashboard showing vehicle, order and sales information so that I can make informed decisions.	4	Medium	Member 3
Total				37		

Project Tracker, Velocity & Burndown Chart:

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed	Sprint Release Date (Actual)
Sprint1	8	1 Day	28 Sep 2026	28 Sep 2026	8	28 Sep 2026
Sprint-2	10	1 Day	29 Sep 2026	29 Sep 2026	9	29 Sep 2026
Sprint3	6	1 Day	30 Sep 2026	30 Sep 2026	6	30 Sep 2026
Sprint4	9	1 Day	1 Oct 2026	1 Oct 2026	8	1 Oct 2026
Sprint-5	4	1 Day	2 Oct 2026	2 Oct 2026	6	2 Oct 2026
Total	37	5 Days	28 Sep 2026	2 Oct 2026	37	2 Oct 2026

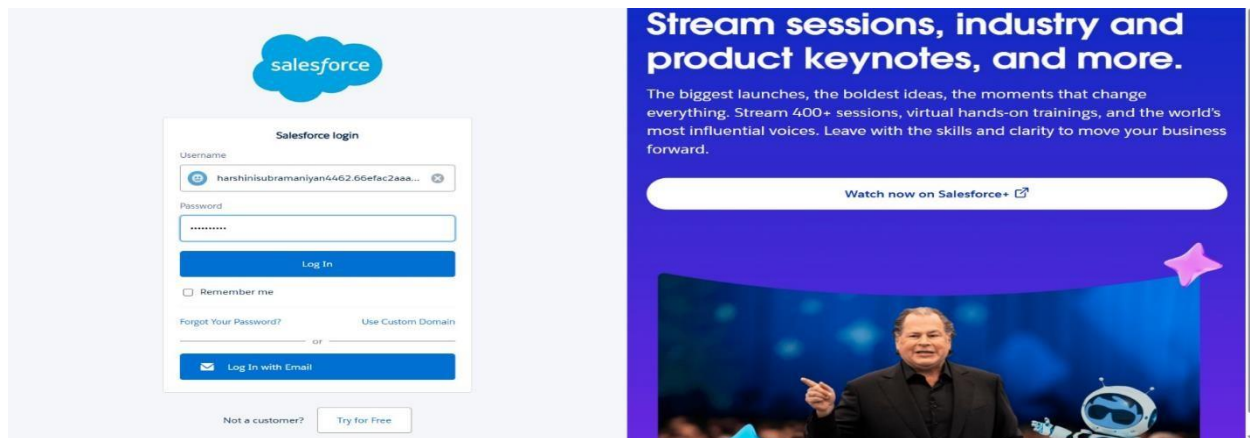

6.Project Development Phase:

Milestone 1: Salesforce Account

Activity 1: Create a Developer Account

1. Open the Salesforce Developer signup page.
2. Enter the required personal and organization details, such as First Name, Last Name, Email, Role, Company, Country, and Postal Code.
3. Select **Developer** as the role.
4. Select **India** as the country and enter the appropriate postal code.
5. Enter a **unique username** in the required format.
6. Review the entered details and click **Sign Me Up** to create the Salesforce Developer account.

Activity 2: Account Activation

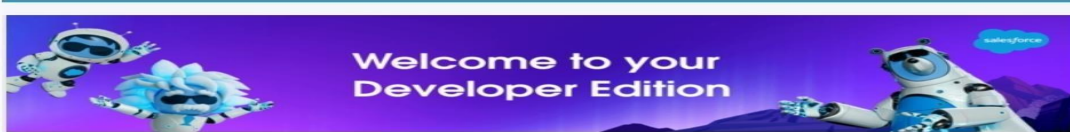

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.
2. Click on Verify Account
3. Give a password and answer a security question and click on change password.
4. Then you will redirect to your salesforce setup page.

Welcome to Salesforce: Reset your password

Inbox

support@... 2 days ago
to me

HI HARSHINI,

Thanks for signing up for a Developer Edition. Now you can start building on Salesforce for free and get hands-on with Agentforce and Data Cloud.

There's just one more step. Use the following link to reset the password for your Developer Edition. This link expires in 24 hours.

[Reset Password](#)

To easily log in later, save this URL:

<https://orgfarm-66cb93bdef-dev-ed.develop.my.salesforce.com>

Here's the username for your Developer Edition:

harshinisubramaniyan4462.66efac2aaa2f@agentforce.com

Your Developer Edition, now enabled with Agentforce and Data Cloud, remains active as long as you continue to use it. It expires after 45 days of non-usage.

Again, welcome to Salesforce!

Milestone 2: Data Management-Objects

Objects & Relationships

Object Name	Purpose	Relationships
Vehicle__c	Stores vehicle details	Related to Dealer & Orders
Vehicle_Dealer__c	Stores authorized dealer info	Related to Orders
Vehicle_Customer__c	Stores customer details	Related to Orders & Test Drives
Vehicle_Order__c	Tracks vehicle purchases	Related to Customer & Vehicle
Vehicle_Test_Drive__c	Tracks test drive bookings	Related to Vehicle Customer &
Vehicle_Service_Request__c	Tracks vehicle servicing requests	Related to Vehicle Customer &

Activity 1: Create Vehicle Object

1. Open **Setup** → **Object Manager** → **Create** → **Custom Object**.
2. Enter **Vehicle** as the label.
3. Enter **Vehicles** as the plural label.
4. Set **Vehicle Name** as the record name.
5. Select **Text** as the data type.
6. Enable **Allow Reports** and **Allow Search**.
7. Click **Save**.

Activity 2: Create Vehicle Dealer Object

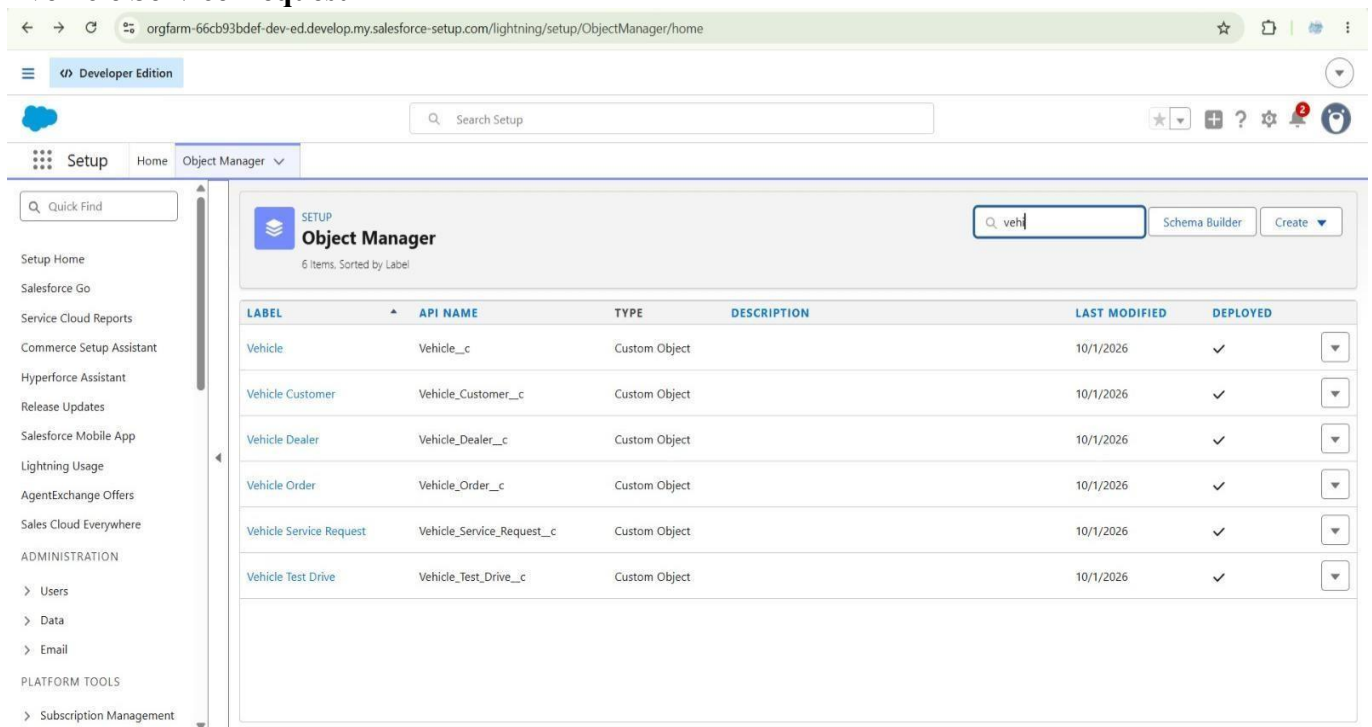

1. Create a new custom object from **Object Manager**.
2. Enter **Vehicle Dealer** as the label.

3. Enter **Vehicle Dealers** as the plural label.
4. Set **Dealer Name** as the record name.
5. Select **Text** as the data type.
6. Enable **Allow Reports** and **Allow Search**.
7. Click **Save**.

Activity 3: Create Remaining Objects

Create the following objects using the same procedure:

- **Vehicle Customer**
- **Vehicle Order**
- **Vehicle Test Drive**
- **Vehicle Service Request**

The screenshot shows the Salesforce Setup interface, specifically the Object Manager page. The browser address bar indicates a development environment. The left sidebar contains navigation links for Setup, Home, and Object Manager. The main content area displays a table of custom objects, with a search bar at the top right containing the text 'veh'. The table lists six objects, all of which are Custom Objects, created on 10/1/2026 and are deployed.

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Vehicle	Vehicle__c	Custom Object		10/1/2026	✓
Vehicle Customer	Vehicle_Customer__c	Custom Object		10/1/2026	✓
Vehicle Dealer	Vehicle_Dealer__c	Custom Object		10/1/2026	✓
Vehicle Order	Vehicle_Order__c	Custom Object		10/1/2026	✓
Vehicle Service Request	Vehicle_Service_Request__c	Custom Object		10/1/2026	✓
Vehicle Test Drive	Vehicle_Test_Drive__c	Custom Object		10/1/2026	✓

Milestone 3: Data Management-Tabs

Activity 1: Creating a Custom Tab (Vehicle)

1. Go to **Setup** → **Quick Find** → **Tabs** and click **Tabs**.
2. Under **Custom Object Tabs**, click **New**.
3. Select **Vehicle** as the object.
4. Select any **Tab Style**.

5. Click **Next**.
6. In **Add to Profiles**, keep the default settings and click **Next**.
7. In **Add to Custom Apps**, keep the default settings and click **Save**.

Activity 2: Creating Tabs for Other Objects

Create custom tabs for all the other objects created previously using the same procedure:

- **Vehicle Dealer**
- **Vehicle Customer**
- **Vehicle Order**
- **Vehicle Test Drive**
- **Vehicle Service Request**

The screenshot displays the Salesforce Setup interface for configuring custom tabs. The browser address bar shows the URL: `orgfarm-66cb93bdef-dev-ed.develop.my.salesforce-setup.com/lightning/setup/CustomTabs/home`. The page header includes the Salesforce logo, a search bar, and navigation tabs: Setup, Home, and Object Manager. The left sidebar shows the 'User Interface' section expanded, with 'Rename Tabs and Labels' and 'Tabs' visible. The main content area is titled 'Custom Tabs' and includes a 'Help for this Page' link. Below the title, there is a brief explanation of custom tabs. The 'Custom Object Tabs' section contains a table with the following data:

Action	Label	Tab Style	Description
Edit Del	Vehicle Customers	Camera	
Edit Del	Vehicle Dealers	Cup	
Edit Del	Vehicle Orders	Box	
Edit Del	Vehicles	Alarm clock	
Edit Del	Vehicle Service Requests	Scales	
Edit Del	Vehicle Test Drives	Computer	

Below the table, the 'Web Tabs' section is shown, indicating that no web tabs have been defined.

Milestone 4: Data Management-App Manager

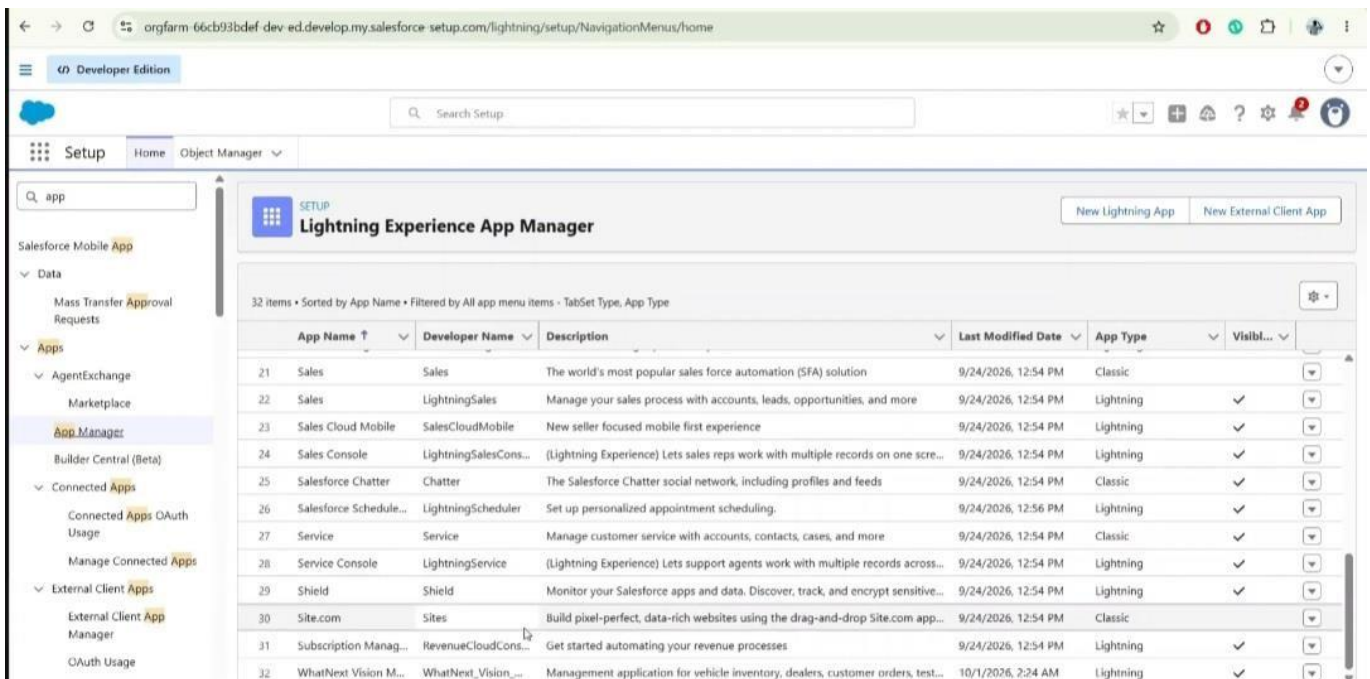

Activity 1: Create a Lightning App

To create a Lightning App page:

1. Go to Setup → search “App Manager” in the Quick Find bar → select App Manager → click New Lightning App.
2. Fill in the App Details and Branding as follows: App Name: WhatNext Vision Motors Developer Name: This will be auto-populated. Description: Give a meaningful description. Image: Optional. Primary Color Hex Value: Keep the default value.
3. Click Next → App Options → keep the default settings → Next → Utility Items → keep the default settings → Next.
4. To Add Navigation Items: Search for Vehicle, Dealer, Customer, Order, Test Drive, Service Request, Reports, and Dashboard in the search bar. Select the required items and move them using the arrow button → Next.

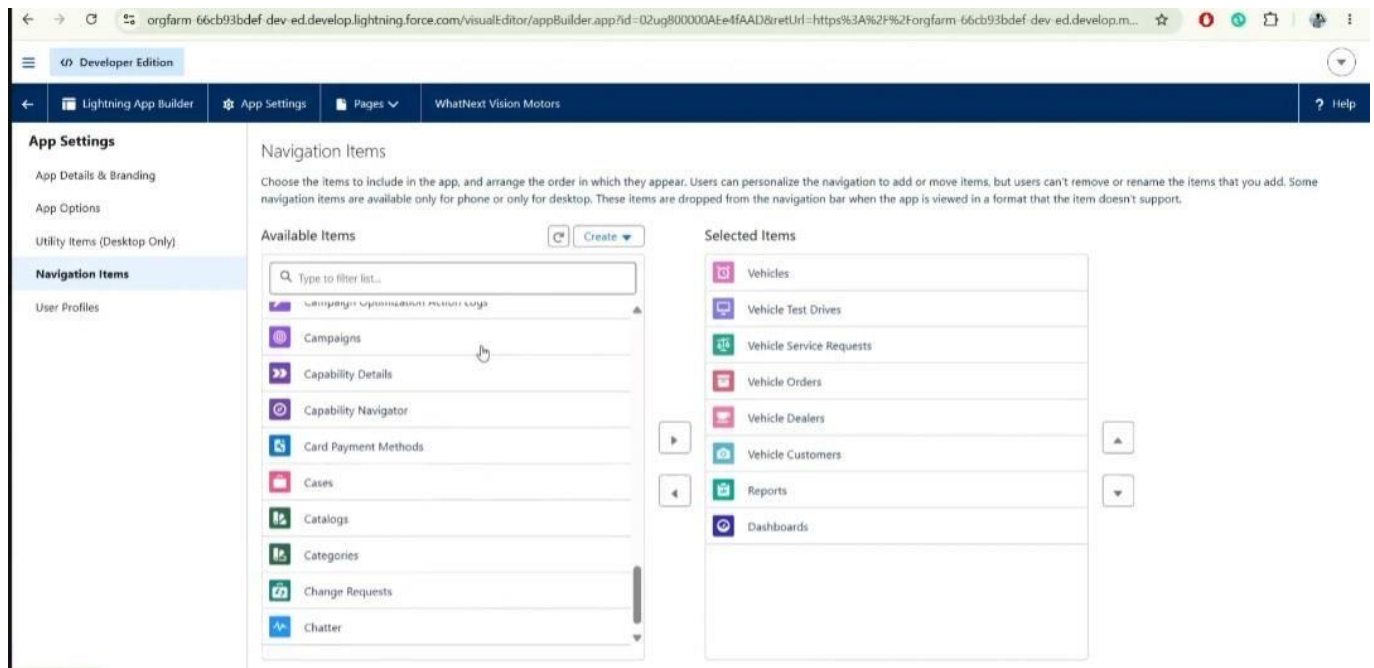

Note: Select the custom objects created in the previous activity.

5. To Add User Profiles: Search for System Administrator in the search bar → select the profile → click the arrow button → Save & Finish.

The screenshot shows the Salesforce Lightning Experience App Manager interface. The left sidebar contains a navigation menu with the following items: Salesforce Mobile App, Data (Mass Transfer Approval Requests), Apps (AgentExchange, Marketplace, App Manager, Builder Central (Beta)), Connected Apps (Connected Apps OAuth Usage, Manage Connected Apps), External Client Apps (External Client App Manager, OAuth Usage). The 'App Manager' item is selected. The main content area displays a table of 32 items, sorted by App Name. The table columns are App Name, Developer Name, Description, Last Modified Date, App Type, and Visibility. The table lists various Salesforce apps like Sales, Sales Cloud Mobile, Sales Console, Salesforce Chatter, Salesforce Scheduler, Service, Service Console, Shield, Site.com, Subscription Manager, and WhatNext Vision Motors.

App Name	Developer Name	Description	Last Modified Date	App Type	Visibility
21 Sales	Sales	The world's most popular sales force automation (SFA) solution	9/24/2026, 12:54 PM	Classic

Milestone 5: Data Management-Fields

Key Fields for Each Object

1. Vehicle__c (Custom Object)

- **Vehicle_Name__c** (Text)
- **Vehicle_Model__c** (Picklist: Sedan, SUV, EV, etc.)
- **Stock_Quantity__c** (Number)
- **Price__c** (Currency)
- **Dealer__c** (Lookup to Dealer__c)
- **Status__c** (Picklist: Available, Out of Stock, Discontinued)

2. Vehicle_Dealer__c (Custom Object)

- **Dealer_Name__c** (Text)
- **Dealer_Location__c** (Text)
- **Dealer_Code__c** (Auto Number)
- **Phone__c** (Phone)
- **Email__c** (Email)

3. Vehicle_Order__c (Custom Object)

- **Customer__c** (Lookup to Customer__c)
- **Vehicle__c** (Lookup to Vehicle__c)
- **Order_Date__c** (Date)
- **Status__c** (Picklist: Pending, Confirmed, Delivered, Canceled)

4. Vehicle_Customer__c (Custom Object)

- **Customer_Name__c** (Text)
- **Email__c** (Email)
- **Phone__c** (Phone)
- **Address__c** (Text)
- **Preferred_Vehicle_Type__c** (Picklist: Sedan, SUV, EV, etc.)

5. Vehicle_Test_Drive__c (Custom Object)

- **Customer__c** (Lookup to Customer__c)
- **Vehicle__c** (Lookup to Vehicle__c)
- **Test_Drive_Date__c** (Date)
- **Status__c** (Picklist: Scheduled, Completed, Canceled)

6. Vehicle_Service_Request__c (Custom Object)

- **Customer__c** (Lookup to Customer__c)
- **Vehicle__c** (Lookup to Vehicle__c)
- **Service_Date__c** (Date)
- **Issue_Description__c** (Text)
- **Status__c** (Picklist: Requested, In Progress, Completed)

Object Field Creation :

1. Go to setup → click on Object Manager → type object name(Vehicle) in quick find bar→ click on the object.
2. Now click on “Fields & Relationships” → New
3. Select Data type as “PickList”
4. Click on Next
5. Fill the above as following:
 - Field Label: Vehicle Modal
 - Fill PickList Values

- Click on Next → Next → Save and new.

Object Field Creation-2 :

1. Repeat the steps 1 & 2 from the activity
2. Select Data type as “Number”.
3. Click on Next

Fill the above as following:

- Field Label: Stock Quality
- Click on Next → Next → Save and new.

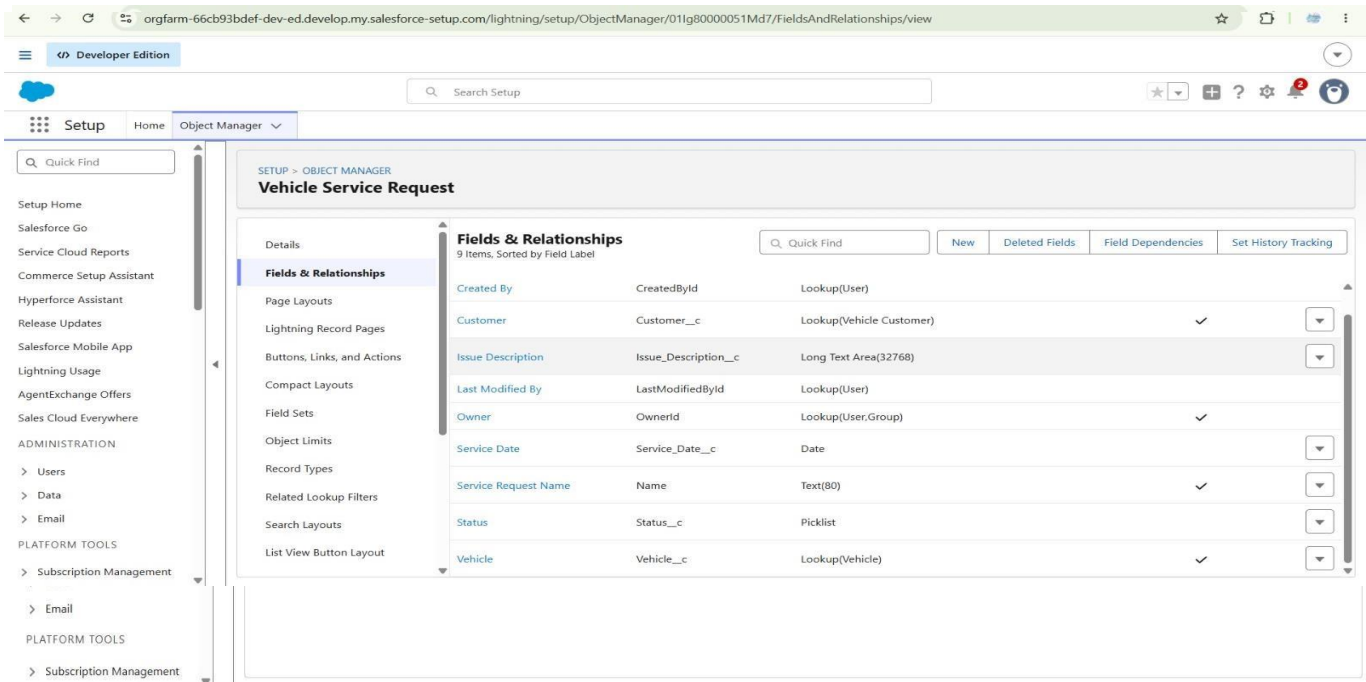

Relationship Field Creation :

Creating a Lookup Relationship in Vehicle Object to Dealer Object.

1. Select DataType as Lookup Relationship.
2. Click Next
3. Select Dealer Object Form Related Field.
4. Click Next and Save.

More Fields Creation

Create remaining fields as mentioned in the Data Management-Fields

The screenshot shows the Salesforce Setup interface for the 'Vehicle Service Request' object. The 'Fields & Relationships' section is active, displaying a table of 9 fields. The table has columns for Field Label, Field Name, and Data Type. Some fields have a checkmark in the 'Relationship' column, indicating they are part of a lookup relationship.

Field Label	Field Name	Data Type	Relationship
Created By	CreatedById	Lookup(User)	
Customer	Customer__c	Lookup(Vehicle Customer)	✓
Issue Description	Issue_Description__c	Long Text Area(32768)	
Last Modified By	LastModifiedById	Lookup(User)	
Owner	OwnerId	Lookup(User,Group)	✓
Service Date	Service_Date__c	Date	
Service Request Name	Name	Text(80)	✓
Status	Status__c	Picklist	
Vehicle	Vehicle__c	Lookup(Vehicle)	✓

Milestone 6: Automation

Flow Creation :

Creating a record triggered flow to assign nearest dealer to the customer's location

Step 1: Create a New Flow

- In Quick Find, type Flows and click Flows. Then click New Flow.

Step 2: Select Flow Type

- Select Start From Scratch and click Next.

Step 3: Select Flow Trigger

- Select Record-Triggered Flow and click Create.

Step 4: Configure the Trigger

- Select the Vehicle Order object.
- Trigger the Flow When: Select A Record Is Created.
- **Set Entry Conditions:** Condition Requirements: All Conditions Are Met (AND) Field: Status__c Operator: Equals Value: Pending

Step 5: Get Customer Information

- Click + and select Get Records.

Step 6: Configure Get Customer Information

- Label: Get Customer Information Object: Vehicle Customer Condition: Field: Id Operator: Equals Value: {!\$Record.Vehicle_Customer__c}

Step 7: Get Nearest Dealer

- Click + and select Get Records.
- Label: Get Nearest Dealer Object: Vehicle Dealer Condition: Field: Dealer_Location__c Operator: Equals Value: {!Get_Customer_Information.Address__c}

Step 8: Assign Dealer to Order

- Click + and select Update Records.

- Label: Assign Dealer to Order How to Find Records to Update and Set Their Values: Use the IDs and all field values from a record or record collection Select Record(s) to Update:
{!Get_Nearest_Dealer}

Step 9: Save the Flow

- Click Save and provide the following label name: Label Name: Auto Assign Dealer

Step 10: Activate the Flow

- Click Activate to activate the Auto Assign Dealer flow.

Record-Trigger Flow Creation :

Creating a record triggered flow to send an email to the customer reminding about the test drive.

Step 1 : Select Record-Triggered Flow and click Create

Step 2 : Select Vehicle Test Drive Object

Trigger the Flow When : A record is created or updated

Set Entry Condition :

- All Conditions Are Met (AND)
- Filed : Status__c
- Operator : Equals
- Value : Scheduled

Step 3 : Click + Add Scheduled Paths (below the trigger).

- Label: Reminder Before Test Drive.
- Time Source: Test_Drive_Date__c
- Offset Number: 1.
- Offset Options: Days Before.
- Click Done.

Step 4 :

1. Click + Add Element → Get Records.

2. Label: Get Customer Information.
3. Object: Vehicle_Customer__c.
4. Filter Conditions: Id = {!\$Record.Customer__c}.
5. How Many Records to Store: Select Only the first record.
6. How to Store Record Data: Choose Automatically store all fields.

Step 5: Send Reminder Email

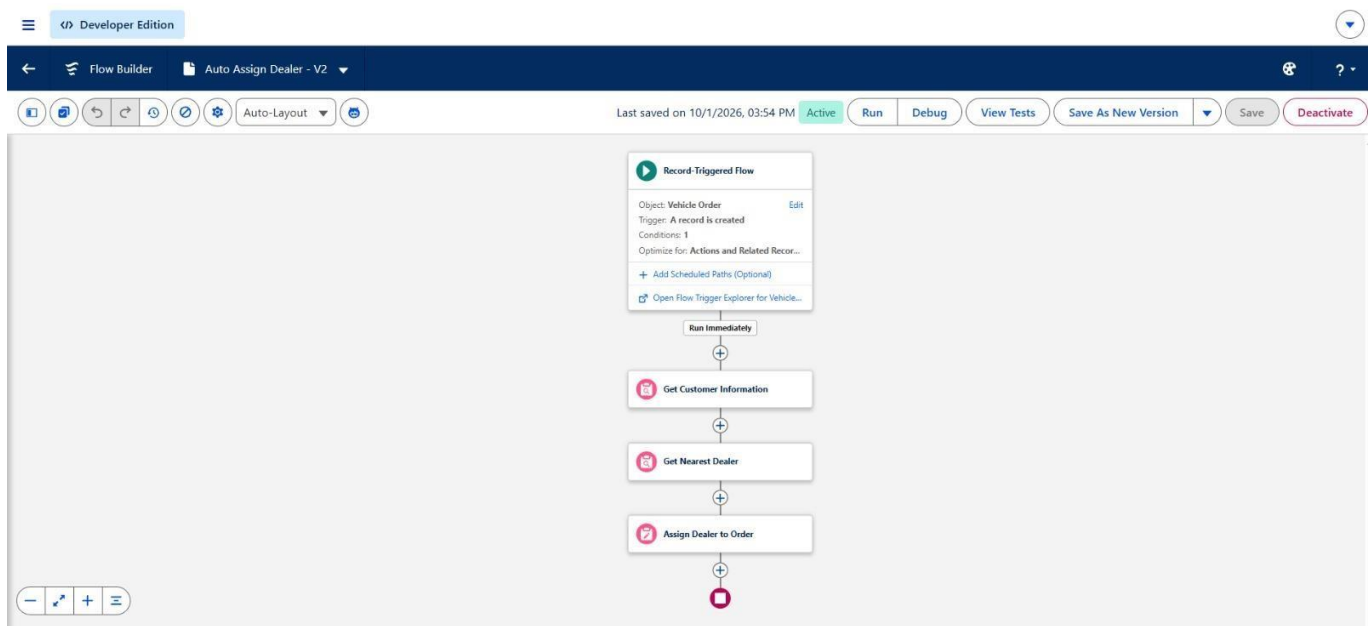

1. Click + Add Element → Action.
2. Action Type: Send Email
3. Label: Send Test Drive Reminder.
4. Subject: "Reminder: Your Test Drive is Tomorrow!".
5. Recipient Address List : {!Get_Customer_[Information.Email](#)__c}
6. Rich-Text-Formatted Body : True
7. Body : Create Variable Api Name : EmailSent

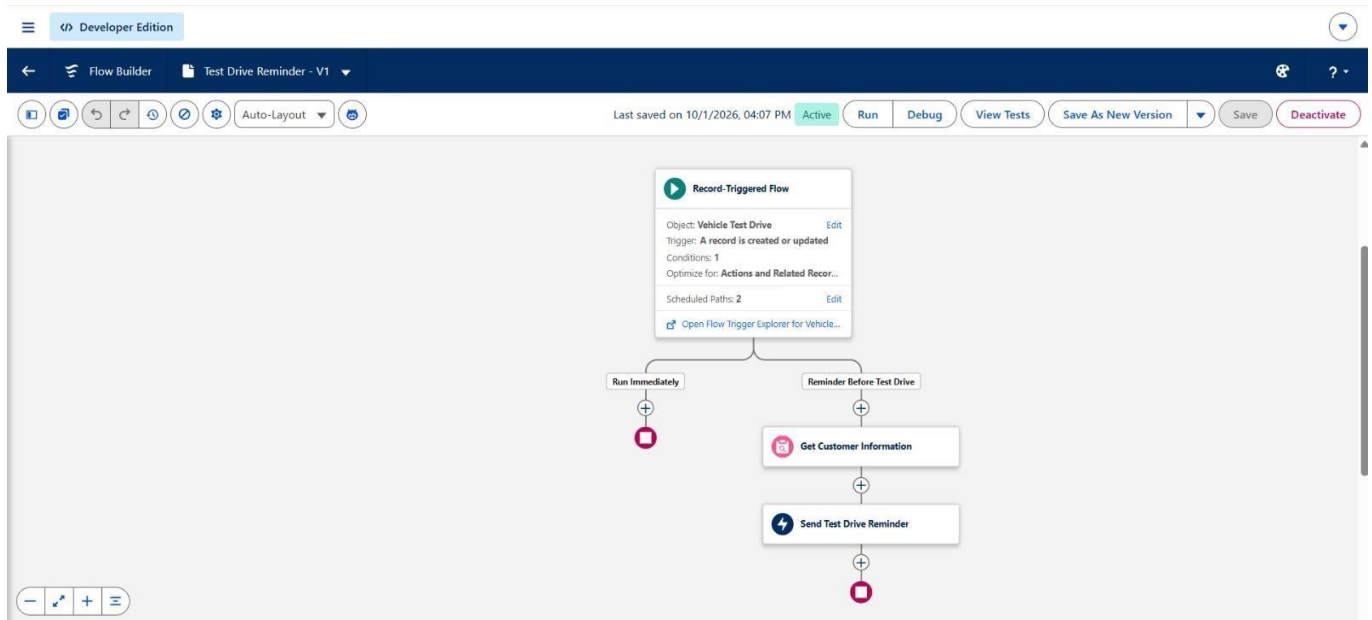

Step 6 : Click save

- **Label Name** : Test Drive Reminder

Step 7 : Activate Flow

Flow Page After Creation :

Milestone 7: Apex and Batch Class

Create Apex and Trigger Batch Jobs :

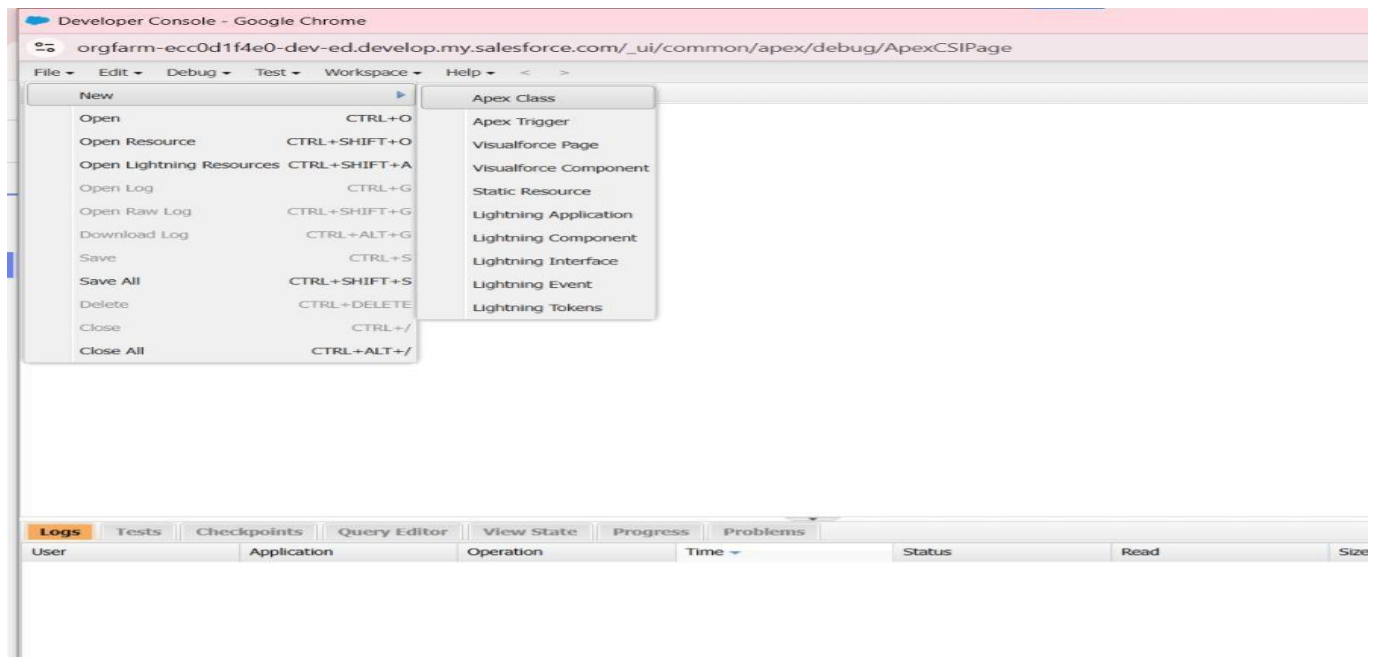

Step 1 : Click Developer Console From Gear icon

Step 2 : click File then Select New then Select Apex.

Step 3 : Give Name For Apex Class

- Class Name : VehicleOrderTriggerhandler

Step 4 : Write Apex Code

Step 5: Write Trigger Handler

Apex Class Name: VehicleOrderTriggerHandler

```
public class VehicleOrderTriggerHandler {

    public static void handleTrigger(
List<Vehicle_Order__c> newOrders,      Map<Id,
Vehicle_Order__c> oldOrders,
        Boolean isBefore,
        Boolean isAfter,
        Boolean isInsert,
        Boolean isUpdate
    ) {

        if (isBefore) {          if
(isInsert || isUpdate) {
            preventOrderIfOutOfStock(newOrders);
        }
    }

        if (isAfter) {          if (isInsert || isUpdate) {
updateStockOnOrderPlacement(newOrders);
        }
    }
}
```

```

    }
}

// Method to prevent orders when the vehicle is out of stock
private static void preventOrderIfOutOfStock(
    List<Vehicle_Order__c> orders
) {
    Set<Id> vehicleIds = new Set<Id>();

    for (Vehicle_Order__c order : orders) {
        if (order.Vehicle__c != null) {
            vehicleIds.add(order.Vehicle__c);
        }
    }

    if (!vehicleIds.isEmpty()) {

        Map<Id, Vehicle__c> vehicleStockMap =
            new Map<Id, Vehicle__c>();

        for (Vehicle__c vehicle : [
            SELECT Id, Stock_Quantity__c
            FROM Vehicle__c
            WHERE Id IN :vehicleIds
        ]) {
            vehicleStockMap.put(vehicle.Id, vehicle);
        }

        for (Vehicle_Order__c order : orders) {

            if (vehicleStockMap.containsKey(order.Vehicle__c)) {

                Vehicle__c vehicle =
                    vehicleStockMap.get(order.Vehicle__c);

                if (vehicle.Stock_Quantity__c <= 0) {
                    order.addError(
                        'This vehicle is out of stock. Order cannot be placed.'
                    );
                }
            }
        }
    }
}

```

```

    }

    // Method to update vehicle stock when an order is placed
    private static void updateStockOnOrderPlacement(
        List<Vehicle_Order__c> orders
    ) {
        Set<Id> vehicleIds = new Set<Id>();

        for (Vehicle_Order__c order : orders) {
            if
(
                order.Vehicle__c != null &&
                order.Status__c == 'Confirmed'
            ) {
                vehicleIds.add(order.Vehicle__c);
            }
        }

        if (!vehicleIds.isEmpty()) {

            Map<Id, Vehicle__c> vehicleStockMap =
                new Map<Id, Vehicle__c>();

            for (Vehicle__c vehicle : [
                SELECT Id, Stock_Quantity__c
                FROM Vehicle__c
                WHERE Id IN :vehicleIds
            ]) {
                vehicleStockMap.put(vehicle.Id, vehicle);
            }

            List<Vehicle__c> vehiclesToUpdate =
                new List<Vehicle__c>();

            for (Vehicle_Order__c order : orders) {

                if (vehicleStockMap.containsKey(order.Vehicle__c)) {

                    Vehicle__c vehicle =
                        vehicleStockMap.get(order.Vehicle__c);

                    if (vehicle.Stock_Quantity__c > 0) {
                        vehicle.Stock_Quantity__c -= 1;
                    }
                }
            }
        }
    }

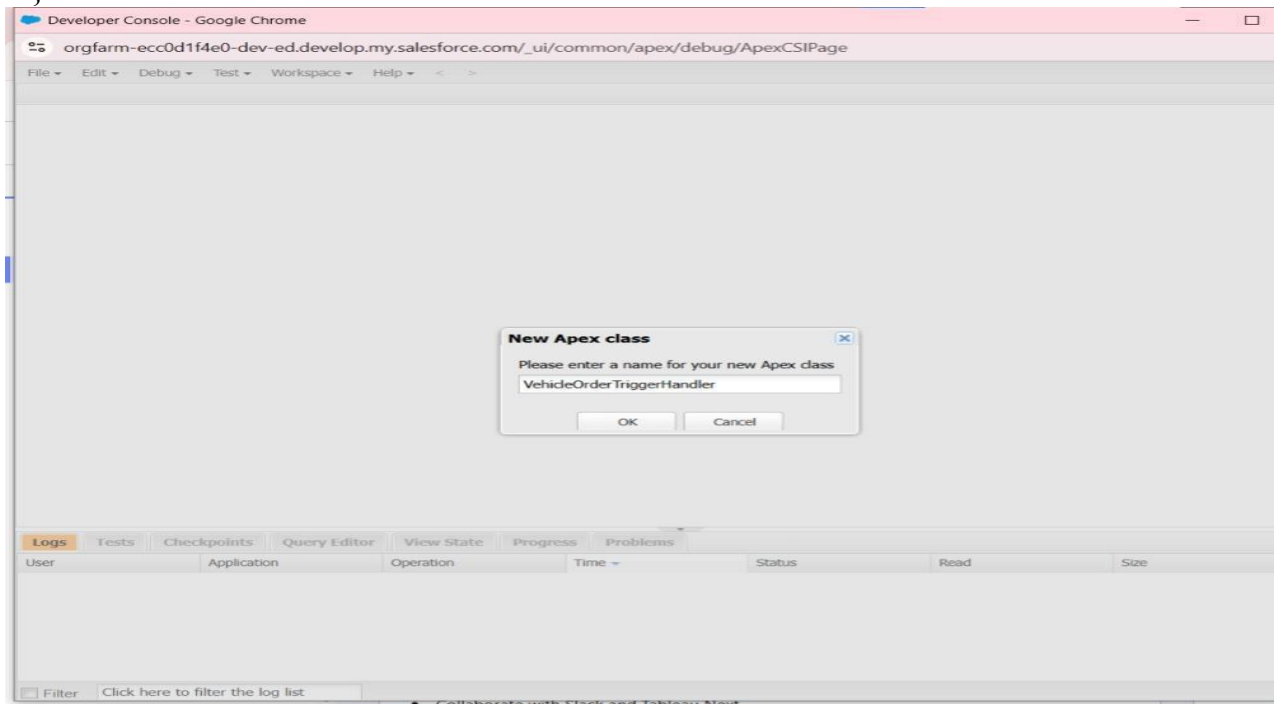

```

```

        vehiclesToUpdate.add(vehicle);
    }
}

if (!vehiclesToUpdate.isEmpty()) {
    update vehiclesToUpdate;
}
}
}

```

Step 6: Create Trigger Class

Trigger Name: VehicleOrderTrigger

Object: Vehicle Order

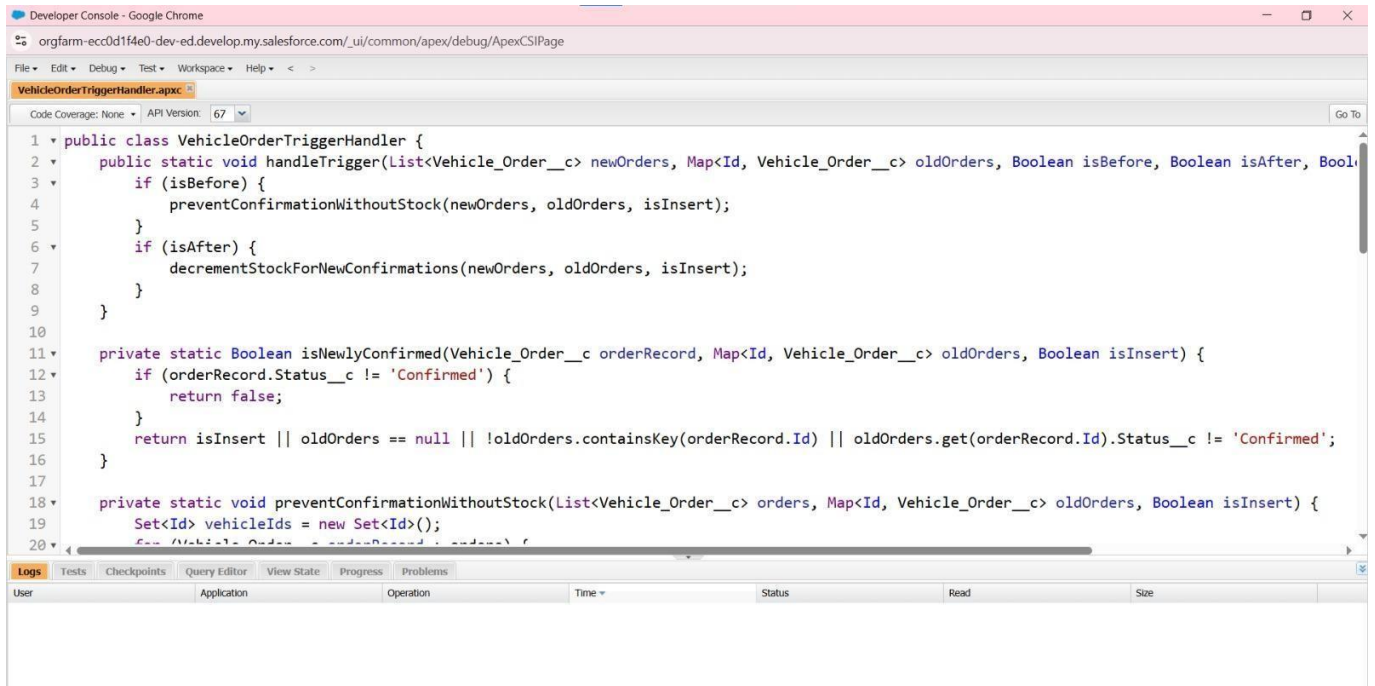

Select the following trigger events:

- Before Insert
- Before Update
- After Insert
- After Update

Step 7: Call Apex Class in Trigger Class

Source Code: trigger VehicleOrderTrigger on

Vehicle_Order__c (

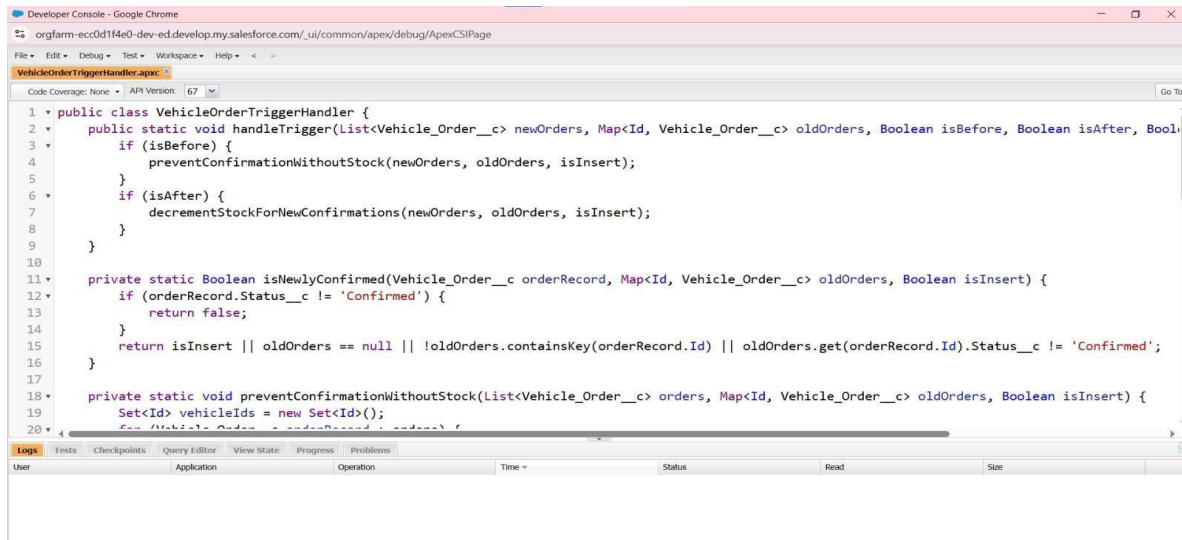

The screenshot shows the Salesforce Developer Console with the file 'VehicleOrderTriggerHandler.apex' open. The code defines a class 'VehicleOrderTriggerHandler' with a static method 'handleTrigger' that takes a list of new orders, a map of old orders, and three boolean flags: 'isBefore', 'isAfter', and 'isInsert'. The 'handleTrigger' method calls 'preventConfirmationWithoutStock' if 'isBefore' is true and 'decrementStockForNewConfirmations' if 'isAfter' is true. It also includes a private static method 'isNewlyConfirmed' that checks if an order record is confirmed and a private static method 'preventConfirmationWithoutStock' that checks for existing orders with the same ID.

```
1 public class VehicleOrderTriggerHandler {
2     public static void handleTrigger(List<Vehicle_Order__c> newOrders, Map<Id, Vehicle_Order__c> oldOrders, Boolean isBefore, Boolean isAfter, Boolean isInsert) {
3         if (isBefore) {
4             preventConfirmationWithoutStock(newOrders, oldOrders, isInsert);
5         }
6         if (isAfter) {
7             decrementStockForNewConfirmations(newOrders, oldOrders, isInsert);
8         }
9     }
10
11     private static Boolean isNewlyConfirmed(Vehicle_Order__c orderRecord, Map<Id, Vehicle_Order__c> oldOrders, Boolean isInsert) {
12         if (orderRecord.Status__c != 'Confirmed') {
13             return false;
14         }
15         return isInsert || oldOrders == null || !oldOrders.containsKey(orderRecord.Id) || oldOrders.get(orderRecord.Id).Status__c != 'Confirmed';
16     }
17
18     private static void preventConfirmationWithoutStock(List<Vehicle_Order__c> orders, Map<Id, Vehicle_Order__c> oldOrders, Boolean isInsert) {
19         Set<Id> vehicleIds = new Set<Id>();
20         for (Vehicle_Order__c orderRecord : orders) {
```

before insert,
before update,
after insert, after
update

```
) {  
    VehicleOrderTriggerHandler.handleTrigger(  
        Trigger.new,  
        Trigger.oldMap,  
        Trigger.isBefore,  
        Trigger.isAfter,  
        Trigger.isInsert,  
        Trigger.isUpdate  
    );  
}
```

Step 8: Create Batch Job

Scenario:

A customer places an order, but the vehicle is out of stock.

- The order remains **Pending**.
- After new stock is added, the **Batch Job** updates the order to **Confirmed**.

Source Code:

```

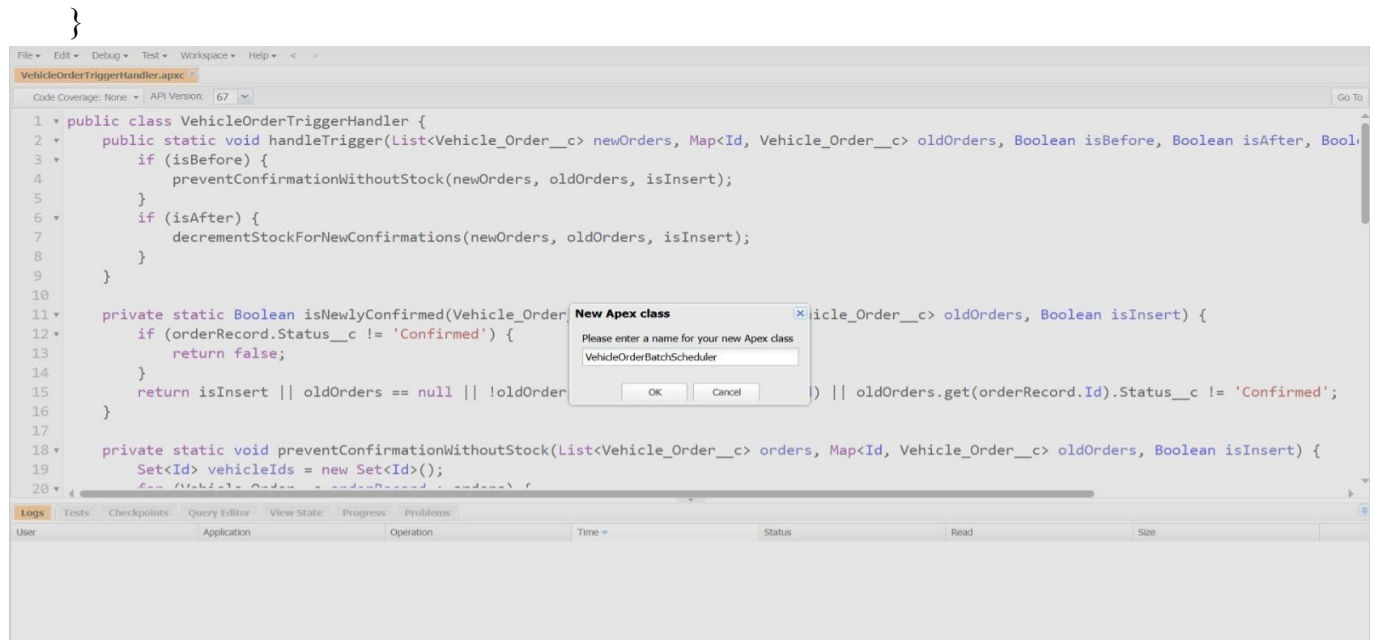

global class VehicleOrderBatch implements Database.Batchable<sObject> { global
    Database.QueryLocator start(Database.BatchableContext bc) { return
    Database.getQueryLocator([
    SELECT Id, Status__c, Vehicle__c
    FROM Vehicle_Order__c
    WHERE Status__c
    'Pending'
    ]); } global void execute(Database.BatchableContext bc, List<Vehicle_Order__c> orderList)
    { Set<Id> vehicleIds = new Set<Id>(); for (Vehicle_Order__c order orderList) { if

```

```

(order.Vehicle__c != null) { vehicleIds.add(order.Vehicle__c);
} } if (!vehicleIds.isEmpty())
{
Map<Id, Vehicle__c> vehicleStockMap = new Map<Id, Vehicle__c>(); for
(Vehicle__c vehicle: [SELECT Id, Stock Quantity__c FROM Vehicle__c WHERE Id IN
vehicleIds]) { vehicleStockMap.put(vehicle.Id, vehicle);
}

List<Vehicle_Order__c> ordersToUpdate = new List<Vehicle_Order__c>();
List<Vehicle__c> vehiclesToUpdate = new List<Vehicle__c>(); for
(Vehicle_Order__c order orderList) { if (vehicleStockMap.containsKey(order.
Vehicle__c)) { Vehicle__c vehicle = vehicleStockMap.get(order.Vehicle__c); if
(vehicle.Stock_Quantity__c > 0) { order.Status__c = 'Confirmed';
vehicle.Stock_Quantity__c -= 1; ordersToUpdate.add(order);
vehiclesToUpdate.add(vehicle);
}
} } if (!ordersToUpdate.isEmpty())
{ update ordersToUpdate;
} if (!vehiclesToUpdate.isEmpty()) { update
vehiclesToUpdate;
} } global void finish(Database.BatchableContext bc)
{
System.debug('Vehicle order batch job completed.');
```

Step 9 : Create Schedule Class then revoked Batch Class in Schedule Class

Source Code :

```

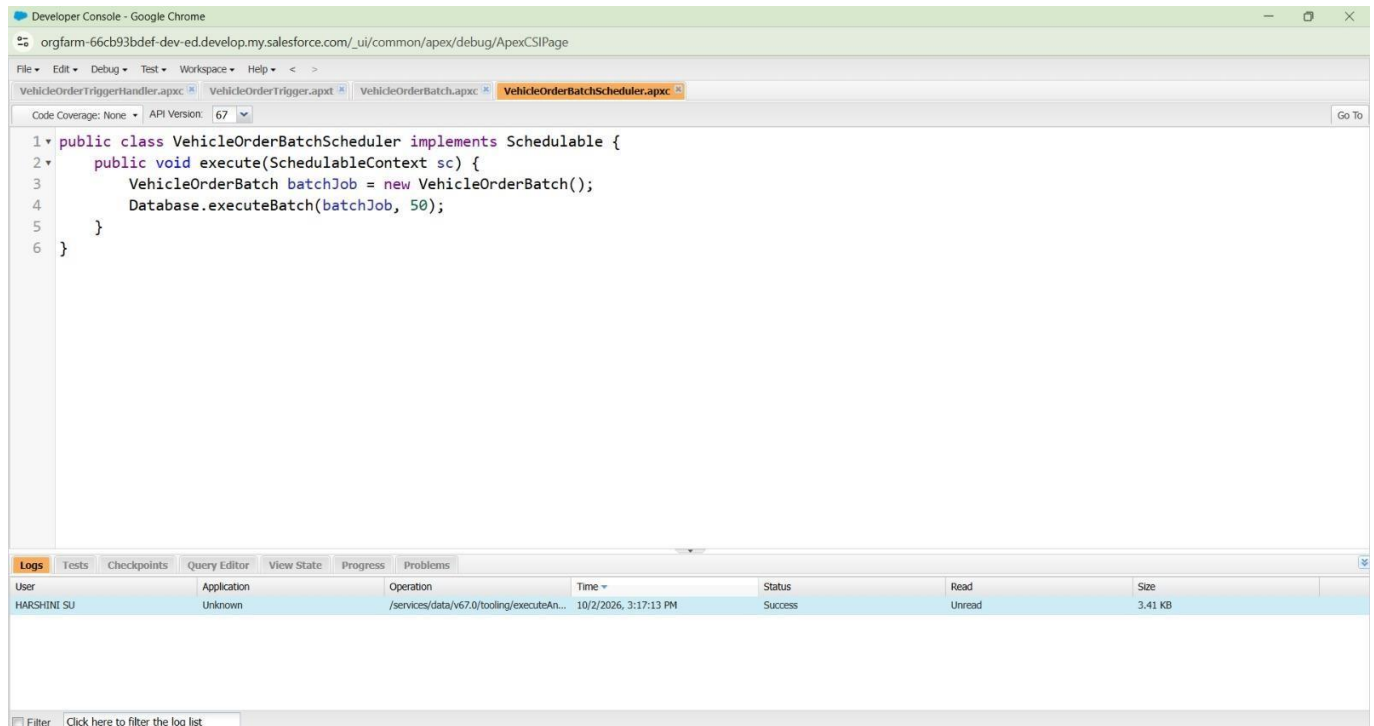

global class VehicleOrderBatchScheduler implements Schedulable {
    global void
    execute(SchedulableContext sc) {

        VehicleOrderBatch batchJob = new VehicleOrderBatch();

        Database.executeBatch(batchJob, 50); // 50 is the batch size

    }
}

```

Step 10 : Schedule the Batch Job To run the batch job every night at midnight :

Source Code :

```
String cronExp = '0 0 12 * * ?'; // Runs daily at 12:00 PM  
System.schedule('Daily Vehicle Order Processing', cronExp, new  
VehicleOrderBatchScheduler());
```

Step 11 : You Can Check where this Schedule Job is Running.

Custom Tabs

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

Custom Object Tabs

8. ADVANTAGES & DISADVANTAGES

Advantages

- ✚ Centralized management of vehicle, dealer, customer, and order data
- ✚ Reduces manual data entry and repetitive work
- ✚ Automated vehicle stock and order validation
- ✚ Faster order processing and status tracking
- ✚ Real-time reports and dashboards
- ✚ Improves data accuracy and consistency
- ✚ Easy access to information through Salesforce
- ✚ Better monitoring of vehicle availability and sales activities

Disadvantages

- ✚ Requires internet access to use the Salesforce platform
- ✚ Initial system configuration requires time and technical knowledge
- ✚ Salesforce platform limitations may affect customization
- ✚ Additional Salesforce features may require suitable licenses
- ✚ Users require basic training to work with the system

9. Conclusion:

The Salesforce-based Vehicle Ordering and Dealership Management System provides an organized and efficient solution for managing vehicles, dealers, customers, orders, and stock information. The implementation of Salesforce automation, validation rules, workflows, reports, and dashboards reduces manual effort and improves data accuracy. The system also provides better visibility of vehicle availability and order status, helping users manage dealership operations more effectively. Overall, the project demonstrates how Salesforce can be used to develop a centralized and automated solution for vehicle ordering and dealership management.

10. FUTURE SCOPE

The system can be enhanced in the future with the following features:

- **Mobile Application** – Enable customers and dealers to manage orders using a mobile app.
- **GPS Integration** – Track dealer locations and provide location-based services.
- **SMS and WhatsApp Notifications** – Send order confirmations, status updates, and reminders.
- **AI-Based Demand Forecasting** – Predict future vehicle demand using historical sales data.
- **Online Payment Integration** – Enable customers to make payments directly through the system.
- **Advanced Analytics** – Provide detailed sales, inventory, and customer insights.
- **Customer Self-Service Portal** – Allow customers to check vehicle availability and track orders.
- **Automated Inventory Alerts** – Notify administrators when vehicle stock reaches a predefined level.
